TALK TO YOUR DOCTOR TODAY ABOUT PROSTATE HEALTH
If your doctor recommends screening:

Advantages:
- A normal PSA blood test may put your mind at ease.
- A PSA blood test may find prostate cancer early.

Disadvantages:
- Sometimes PSA test results suggest something is wrong when it is not (a "false positive") which may lead to more testing.

If your doctor DOES NOT recommend screening:

Advantages:
- You are not at greater risk at this time for prostate cancer.
- A PSA blood test may not be helpful for your age.
- Continue to have conversation with your doctor in the future.

Disadvantages:
- There is a small chance prostate cancer treatment may be delayed.

Talk with your doctor to find out if prostate screening is right for you.

Are you at greater risk for prostate cancer:
- African-American
- Older than 50 years of age
- Have a member of the family with prostate cancer.

Know the advantages and disadvantages of PSA blood testing.
